EDUCATION

- **B.Tech – Computer Science and Engineering** Sept 2022 – May 2026
  VIT Bhopal University **CGPA: 7.80 / 10**

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, SQL
- **Databases And Tools:** MySQL, SQLite, MongoDB, Power BI, Tableau, Excel, Git, Streamlit, Folium, OpenCV
- **Frameworks:** Scikit-learn, TensorFlow, PyTorch, PyCaret, XGBoost, LightGBM, Pandas, NumPy, Matplotlib, Seaborn, LangChain, HuggingFace Transformers, FAISS, SHAP, VADER, DistilBERT, Groq LLMs

PROJECTS

Supplier Credibility Analysis *Python, Pandas, PyCaret, LightGBM, Scikit-learn*
- **Situation:** The sales team's outreach to over 300,000 unverified suppliers was inefficient and untargeted, leading to wasted effort on low-potential leads.
- **Task:** Leverage insights from an initial deep-dive analysis to build a predictive model that could score and rank suppliers for an efficient targeting strategy.
- **Action:** Performed an EDA to identify key trust predictors (age, tenure, location), then built a LightGBM classification model in PyCaret to score all unverified suppliers.
- **Result:** Produced a predictive model with 87% Recall and delivered a prioritized target list that empowered the sales team to strategically target high-potential leads.

Telecom Churn Analytics *Python, XGBoost, GridSearchCV, SHAP, Power BI*
- **Situation:** High customer churn was affecting retention for a telecom provider.
- **Task:** Created a model to classify and visualize at-risk users based on usage behavior.
- **Action:** Processed 7,043 records, trained XGBoost model (86% accuracy), and used SHAP for interpretability. Created Power BI dashboards to present churn insights and segmentation.
- **Result:** Enabled data-driven retention strategies; Stakeholders simulated a 22% reduction in churn using targeted actions.

Shopinion *Python, Transformers, PyTorch, SHAP, Streamlit*
- **Situation:** The business needed a scalable solution to quantify customer sentiment from 25k+ of unstructured text reviews and interpret the key drivers behind the feedback.
- **Task:** To develop and deploy an end-to-end NLP model that accurately classifies sentiment and provides transparent, word-level explanations for its predictions.
- **Action:** Bootstrapped initial labels using VADER, fine-tuned a DistilBERT model for classification, integrated SHAP for explainability, and deployed the final pipeline in an interactive Streamlit dashboard.
- **Result:** Achieved 96% accuracy and delivered an interactive dashboard that provides real-time, explainable sentiment insights, enabling a data-driven approach to understanding customer feedback.

Pdfs Explorer *Python, LangChain, HuggingFace, FAISS, Streamlit, Groq LLMs*
- **Situation:** Organizations needed a way to extract insights from large PDF collections, but manual search was slow and keyword-based tools lacked context.
- **Task:** Build an end-to-end system to enable semantic search and interactive QA across multiple PDFs.
- **Action:** Extracted and chunked PDF text, generated embeddings with HuggingFace, stored them in FAISS vector DB, and integrated Groq LLMs via LangChain for retrieval-augmented generation. Deployed a user-friendly Streamlit interface supporting multi-document uploads and chat history.
- **Result:** Delivered a scalable RAG application that allowed real-time conversational exploration of unstructured text, significantly improving information retrieval efficiency and usability.

LEADERSHIP AND INITIATIVES

- **Core Team, Sports Club** — Coordinated event logistics and operations for 200+ participants during the annual fest.
- **Event Lead, OWASP Club** — Organized 5+ technical events, successfully increasing member engagement by 50%.

CERTIFICATIONS

- **Generative AI Career Essentials** – IBM Career Education **Jan 2025 – Apr 2025**
- **Full Stack Developer MERN** – SmartBridge X MongoDB **Jan 2025 – Apr 2025**
