

JAVED AHMAD

VIT, Bhopal, India

+91-7903632560 jvedahmd@gmail.com LinkedIn GitHub

Professional Summary

AI/ML Engineer specializing in LLM Orchestration, RAG architectures, and B2B Intelligence platforms. Expert in building data pipelines, optimizing vector databases, and scaling AI products from raw data to production-ready insights. Proven track record in deploying Generative AI solutions that turn complex, messy data into clear and actionable business insights.

Education

Vellore Institute of Technology

Bachelor of Technology in Computer Science Engineering; CGPA: 8.00/10.0

Bhopal, India

Expected Oct 2026

Technical Skills

Programming Languages: Python, Java, C++, SQL

Databases & Tools: MySQL, SQLite, MongoDB, Power BI, Excel, Git, Streamlit, FAISS, Pinecone

Frameworks & Libraries: Scikit-learn, TensorFlow, PyTorch, PyCaret, XGBoost, LightGBM, Pandas, NumPy, Matplotlib, Seaborn, LangChain, HuggingFace, Transformers

Professional Experience

Coherent Market Insights

On-site

AI Specialist

Oct 2025 – March 2026

- Architected **NutraIQX.ai** with **batch ingestion pipelines** and **PostgreSQL full-text search (TSVector + GIN indexes)**, enabling sub-second retrieval across **50k+ B2B entities** with two-tier caching.
- Built a **RAG-based Industry Expert Agent** and multi-LLM **Competitive Analysis engine** (OpenAI, Perplexity, Groq) with NLP pipelines for intent classification and weighted buyer-seller matching.
- Deployed on **GCP Cloud Run** with **Cloud Build CI/CD** and GIN index preheating, maintaining high availability for **250+ concurrent users**.

BROKAI LABS

Remote

AI Engineer Intern

April 2026 – Present

- Engineered a **multi-agent lead generation pipeline** using intent classification and behavioral scoring to scrape, qualify, and route **5k+ targeted B2B leads**, automating personalized outreach and eliminating manual prospecting.
- Designed and engineered **Me vs Mind** end-to-end — building a **gamification engine** (streaks, rewards, levels), prompt-driven task breakdown, and a low-friction UI system for a clinically-informed ADHD productivity tool.
- Built and shipped **SolarFlow**, a role-based **React Native** app on the **Google Play Store** — a three-sided platform for admins, technicians, and customers managing the full solar installation lifecycle from lead to handover.

Technical Projects

Baby Bloom | Python, LangChain, FAISS, Cohere

GitHub

- Situation:** New parents lacked a reliable, immediate source for safe and empathetic newborn health guidance.
- Task:** Develop a specialized RAG chatbot delivering accurate answers grounded strictly in pediatric medical textbooks.
- Action:** Built a LangChain RAG pipeline using LLM and FAISS vectorization; integrated CohereRerank and strict prompt engineering to ensure medical safety and empathetic tone.
- Result:** Deployed a safe AI assistant ensuring high-quality retrieval with automated disclaimers, effectively bridging the gap in immediate pediatric care.
- Situation:** Unpredictable disease outbreaks in India hindered effective early diagnosis and public health planning.
- Task:** Build a scalable ML web application to predict diseases from symptoms and visualize regional outbreak trends.
- Action:** Trained a Random Forest model on 5k+ samples and performed geospatial clustering ($k = 10$); deployed a Streamlit dashboard with Folium heatmaps using GeoJSON overlays.
- Result:** Achieved 87% classification accuracy across 15+ diseases and identified 10 high-risk zones, significantly boosting public health response capacity.

Professional Certifications

Generative AI Career Essentials: IBM Career Education (Jan 2025 – Apr 2025)

Full Stack Developer MERN: SmartBridge X MongoDB (Jan 2025 – Apr 2025)
