JAVED AHMAD

VIT, Bhopal, India | +91-7903632560 | jvedahmd@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

AI/ML engineer shipping RAG pipelines, multi-agent systems, and business-automation tools in production. Built a B2B intelligence platform serving 250+ concurrent users with sub-second retrieval over 50k+ entities, and a multi-LLM engine spanning OpenAI, Perplexity, and Groq. I like owning systems end-to-end, from the data pipeline and retrieval layer through prompts and deployment.

PROFESSIONAL EXPERIENCE

AI & Automation Engineer
Jul 2026 – Present

FinPulse Media FZ-LLC (Clickeon) — *Remote*

- Automated the company's sales pipeline end to end by building a lead scraper that sources and feeds 100+ prospects into the pipeline daily, replacing manual prospecting and handoffs between capture, qualification, and follow-up.
- Built automated content workflows that generate and route client-facing content through the company's prompt library, cutting manual content production time.
- Own the internal AI skills and prompt library and run training sessions on applying AI tools to daily workflows, acting as the team's point person for AI adoption.
- Manage client websites on Vercel and WordPress, owning both technical delivery and client-facing AI work.

AI Engineer Intern
Apr 2026 – Jun 2026

Brokai Labs — *Remote*

- Engineered a multi-agent lead-generation pipeline using intent classification and behavioral scoring to scrape, qualify, and route 5k+ targeted B2B leads, automating personalized outreach and eliminating manual prospecting.
- Designed and built Me vs Mind end to end, including a gamification engine (streaks, rewards, levels), prompt-driven task breakdown, and a low-friction UI system for a clinically-informed ADHD productivity tool.
- Built and shipped SolarFlow, a role-based React Native app on the Google Play Store serving as a three-sided platform for admins, technicians, and customers managing the full solar-installation lifecycle from lead to handover.

AI Specialist
Oct 2025 – Mar 2026

Coherent Market Insights — *On-site*

- Architected NutraIQX.ai with batch ingestion pipelines and PostgreSQL full-text search (TSVector + GIN indexes), enabling sub-second retrieval across 50k+ B2B entities via a two-tier caching layer.
- Built a RAG-based Industry Expert Agent and a multi-LLM Competitive Analysis engine that called OpenAI, Perplexity, and Groq for different query types: Perplexity handled web-grounded, real-time lookups, while OpenAI and Groq handled structured reasoning and generation. Added NLP pipelines for intent classification and weighted buyer-seller matching.
- Deployed on GCP Cloud Run with Cloud Build CI/CD and GIN index preheating, sustaining high availability for 250+ concurrent users.

TECHNICAL PROJECTS

Baby Bloom *Python · LangChain · FAISS · Cohere* — GitHub

- Situation: New parents lacked a reliable, immediate source for safe, empathetic newborn health guidance.
- Task: Build a RAG chatbot that answers strictly from 10 pediatric medical textbooks on neonatal health, with no unsourced claims.
- Action: Built a LangChain RAG pipeline with FAISS vector search and CohereRerank to re-rank passages by relevance, used constrained prompting to keep responses grounded in source text, and added automated medical disclaimers with an empathetic response tone for anxious parents.
- Result: Shipped a safe AI assistant with high-quality retrieval and consistent grounding, closing a real gap in immediate pediatric guidance.

Disease Outbreak Prediction System *Python · Random Forest · Streamlit · Folium* — GitHub

- Situation: Unpredictable disease outbreaks in India hindered early diagnosis and public health planning.
- Task: Build a scalable ML web app to predict disease from symptoms and visualize regional outbreak trends.
- Action: Trained a Random Forest classifier on 5k+ labeled symptom samples across 15+ diseases, ran geospatial clustering (k = 10) on case data, and built a Streamlit dashboard with Folium heatmaps over GeoJSON overlays to visualize regional risk.
- Result: Achieved 87% classification accuracy and flagged 10 high-risk zones, giving public health responders an actionable early-warning view.

TECHNICAL SKILLS

Languages: Python, SQL, Java, C++
AI / LLM Engineering: LangChain, RAG pipelines, LLM orchestration, multi-agent systems, prompt engineering, NLP, HuggingFace, Transformers, FAISS, Pinecone
ML / Data Science: Scikit-learn, Pandas, NumPy, Random Forest, XGBoost
Infra / Tools: Docker, FastAPI, GCP Cloud Run, Cloud Build CI/CD, PostgreSQL, MySQL, SQLite, MongoDB, Git, Streamlit

EDUCATION

Vellore Institute of Technology, Bhopal — *2022 – 2026*

Bachelor of Technology in Computer Science Engineering, CGPA: 8.00/10.0

PROFESSIONAL CERTIFICATIONS

- Generative AI Career Essentials — IBM Career Education (Jan – Apr 2025)
- Full Stack Developer MERN — SmartBridge X MongoDB (Jan – Apr 2025)
